 Order from L.C. or S.L.A. m/\$1.80 ph/\$1.80 61-15231

Trans. of Astronomicheskii Tolkulyar (USSR) 1959,
 no. 204, p. 13-14.

Spectral observations with a prism camera in the red
 indicate that matter, in the form of jets and filaments,
 is flowing away from the nebula or is carried away
 from it by a stream in two opposite directions. It is
 difficult to think that the formation (and the luminosity
 mechanism) of the filaments and jets situated near
 IC443=S40 and directed from north to south is a result
 of the effect of excitation, the ejection of gas from the
 stars, or a collision of nebulosities moving in space.
